

Introduction to Vulnerability Assessment

1 HOUR LIVE ONLINE INSTRUCTOR-LED TRAINING FOR IT PERSONNEL

A key component for developing good cybersecurity hygiene within an organization is an effective vulnerability assessment program. This course examines the basics of utilizing both paid and open source vulnerability assessment tools, interpreting results, and presenting significant findings to non-technical management. This technical course is designed for IT personnel, technical managers and security personnel.

COURSE TOPICS

- Identifying common assessment tools
- Conducting pre-assessment planning
- Vulnerability scanning critical concerns
- Interpreting assessment results
- Presenting findings to management
